FOR COZAINT RESELLER PARTNERS

MARCIA™ Reseller Sales Guide

How to identify, qualify and close MARCIA opportunities with your surveillance customers

November 2026 · Draft for review

cozaint.com · info@cozaint.com · 760-975-8000

The story in thirty seconds

Media & Entertainment proved LTO for video. MARCIA makes it practical for surveillance. Patented VMS integration makes the storage tier invisible to the operator. The result is substantially more retained video at dramatically lower lifecycle cost.

Your customers are buying racks of hard drives to keep video nobody watches every day, then cutting resolution, frame rate or retention when the budget runs out. Hollywood solved the same problem years ago with LTO tape. Surveillance never adopted it because operators would not leave the VMS, hunt for tapes and wait on IT.

Cozaint MARCIA™ removes that barrier. Its patented architecture (U.S. Patent No. 12,755,902) lets an operator's normal VMS playback request recall archived video from LTO and play it on the same timeline. Recent video stays on disk; months or years of history sit on LTO at a fraction of the cost.

What it means for your business

- **Win more bids** where retention is long or mandated: casinos, airports, prisons, campuses, hospitals, banks, municipalities and critical infrastructure.
- **Sell a new storage tier** on every surveillance project, not just cameras and recorders.
- **Grow with the customer.** The archive grows with every camera and every month of retention: more cartridges, library expansion, and Media Lifecycle Renewal services.
- **Lead with savings, close on evidence.** Storage savings start the conversation; keeping Trusted Visual Evidence for longer is why customers buy.

Know the product family

	MARCIA™	askALICE™	ALICE1™
What it is	Intelligent Video Lifecycle Management platform	Enterprise turnkey disk-plus-LTO system, powered by MARCIA	Compact LTO archive appliance, powered by MARCIA
Sell it when	The customer has a VMS and wants a retention tier	The customer wants one complete system for a large site	The site is smaller or self-contained
Typical scale	Hundreds of terabytes to petabytes	Hundreds of terabytes to petabytes	A single appliance

Works with: Milestone XProtect, Hanwha WAVE, Digital Watchdog DW Spectrum, Network Optix Nx Witness and Cozaint BOBBYvms. **Validated on:** HPE StoreEver, Quantum Scalar and ATTO XstreamCORE.

The patented workflow, in words a customer remembers

Request.
The operator moves the VMS timeline to a past date and time.

Locate.
MARCIA identifies which storage tier holds that video.

Map.
It maps the request to the exact cartridge and position.

Recall.
The tape library loads the cartridge and reads the video.

Play.
The video returns to the same VMS timeline.

"The operator moves the timeline. MARCIA does the rest." No extra steps, no restore job, no IT ticket. Older video on tape typically returns within a few minutes.

Spot the opportunity

Ideal MARCIA indicators

The more of these a customer has, the stronger the fit:

Indicator	Why it matters
400 TB or more of video storage, now or planned	The tape tier's fixed costs pay off quickly at this scale; savings grow from there
6 to 12 months of retention or longer	Disk cost grows in direct proportion to retention; tape does not
Hundreds or thousands of cameras	More cameras, more video, more savings
Regulatory or policy retention	Casinos, corrections, government records, healthcare, banking
Litigation exposure	Claims and disputes often surface months after the event
High-resolution or high-frame-rate cameras	The customer wants quality, not compromise
An existing Milestone environment (or another supported VMS)	MARCIA adds to what they run; nothing is ripped out
A storage refresh coming due	The best moment to change the architecture
Power, cooling or rack-space pressure	Cartridges at rest draw no power and need no cooling

Where to look first

Banks and financial institutions, casinos, airports and transportation, hospitals, prisons and corrections, campuses, municipalities and utilities. Cozaint's website has a page for each of these industries that you can send to customers.

Signs the fit is weaker (for now)

- Under roughly 100 TB with short retention: disk-only may be simpler today. Offer ALICE1, or come back at the next refresh.
- The customer only keeps video for a few days and has no reason to keep more.
- No supported VMS and no plan to change.

Qualify the deal

Ask five questions first

1. **How many cameras** do you have, and how many are you adding?
2. **What resolution and frame rate** do they record at?
3. **How long do you keep video today?**
4. **How long would you like to keep it,** or how long are you required to?
5. **What storage do you have now, and what does it cost** to buy, power and replace?

With these five answers you can run the storage cost calculator at **cozaint.com/assessment** in front of the customer and download a PDF report with their name on it.

Then go deeper

- Which VMS do you run, and which version?
- Who decides on storage: security, IT, facilities or finance? Who signs?
- Has an incident, claim or investigation ever needed video you no longer had?
- Are there retention rules you must meet (state records rules, gaming regulations, corrections policy, healthcare, banking)?
- When is your current storage due for replacement or expansion?
- Are you considering cloud storage? What would the upload connection cost?
- Do you need offline copies of video for ransomware protection?
- Are you planning to use AI analytics on recorded video?

Qualification checklist

Ready to propose when…	✓
Camera count, resolution and retention are known	
The VMS is supported (or the customer will move to one)	
Storage is 400 TB or more, or retention is 6 months or more	
A budget holder is identified	
There is a reason to act: refresh, expansion, new project, mandate or incident	
The deal is registered with Cozaint	

Position MARCIA for each audience

Audience	What they care about	What to say
Security director / operators	Finding video fast, without help	"Your operators keep using the same VMS timeline. Older video comes back from tape on its own, usually within minutes, with no IT ticket."
IT	Reliability, support load, integration	"Standard servers, a SAS-connected LTO library and an open tape format. Policy moves video automatically. Your team is not pulled in to restore footage."
Finance (CFO)	Total cost over the life of the system	"Run your numbers in the calculator: over five years MARCIA typically costs 44% less than disk-only at 1 PB and 69% less at 5 PB, and far less than cloud."
Legal, risk and compliance	Evidence, retention rules, chain of custody	"Keep the full retention period at full quality. Operators export the original, unaltered recording. Cartridges can be stored offline."

Audience	What they care about	What to say
Executives	Risk, cost and the story	"Hollywood trusts LTO with its most valuable video. We are bringing the same approach to our security video, with a patented workflow."

Handle the objections

Objection	Answer
"Tape is old technology."	LTO is not VHS. It is the current data-archive standard used by Hollywood studios, broadcasters and enterprise IT, with LTO-10 at 30 TB per cartridge (up to 40 TB with the newest cartridges) and a roadmap to 576 TB.
"Tape is slow."	Recent video plays from disk at once. Older video typically returns within a few minutes, which is far faster than an IT restore or a lost recording. Size the disk tier so the video operators review most often stays on disk.
"My operators won't use another system."	They don't have to. That is what the patent covers: the request starts on the normal VMS timeline and the video comes back to the same timeline.
"We'll just use the cloud."	Cloud charges every month for every terabyte, needs an upload connection big enough for every camera around the clock, and may charge to download. Over five years MARCIA costs 77% to 92% less than cloud storage in the calculator's model.
"Hard drives keep getting cheaper."	The system around them doesn't: enclosures, servers, power, cooling, rack space and replacement every five years. Disk cost grows with every month of retention; tape mostly adds cartridges.
"We already have a tape library and archive software."	Generic archive software makes tape an IT backup. MARCIA makes it part of the operator's workflow, with a patented VMS integration.
"What if we change VMS?"	MARCIA works with Milestone, Hanwha WAVE, Digital Watchdog, Network Optix and BOBBYvms, and LTO is an open format, so the archive is not locked to one server.

Objection	Answer
“Is it proven?”	The City of Oceanside kept one year of 1080p video from more than 30 cameras at 54% lower five-year cost than disk-only, using the disk-and-LTO architecture MARCIA is built on. “Cozaint’s askALICE has been an ideal fit for our surveillance recording needs and our budget.” Scott Prather, Senior IT Analyst.

Win against the alternatives

Alternative	Where it falls short	MARCIA’s answer
Disk-only (NVRs, video servers, storage arrays)	Cost rises in step with retention; power and cooling 24/7; replacement every few years	Small disk tier plus LTO; cartridges at rest draw no power; savings grow with scale
Cloud video storage	Recurring fees on every terabyte; bandwidth; retrieval fees; dependence on the internet	On-site archive with no monthly storage fees and no upload bottleneck
Tape library with generic archive or backup software	Operators must leave the VMS; restores need IT	Patented VMS integration: the operator never leaves the timeline
Cutting resolution, frame rate or retention	Throws away the evidence the cameras were bought to capture	Keep full quality for the full retention period

Working with Cozaint

Deal registration

Register every opportunity at **cozaint.com/deal-registration.html**. Cozaint reviews each registration and confirms by email. Approved registrations are protected for 90 days from approval; if an active deal needs more time, ask the Cozaint Sales Team before the protection ends.

Pricing and margins

Partner pricing and the partner price list are provided once you are approved as a Cozaint reseller partner. Margins vary by deal; register early and talk to the Cozaint Sales Team about each opportunity.

Sizing and proposals

- **Storage cost calculator** at cozaint.com/assessment: size the system, compare MARCIA with disk and cloud, and download a branded PDF report for the customer.

- **Design help:** send the five answers to the Cozaint Sales Team and we will help size the disk tier, library, drives and cartridges.
- **Customer calls:** Cozaint joins calls with you when it helps close the deal.

Training and certification

Sales and technical training so your team can design, sell and support MARCIA. Ask the Cozaint Sales Team for the next session.
