

ENTERPRISE CLASS

askALICE is a professional-grade enterprise video management solution (VMS) combined with industry-leading affordable long-term video retention. *askALICE* offers a unique and proven approach with its scalability, making it very effective and economical to record, store, and manage all of your video feeds.

LTO OPEN STANDARD

LTO technology is an time-tested technology with decades of innovation. Each generation of LTO technology is also compatible with its previous generation.

ENCRYPTION SECURITY

LTO tape drive encryption is specified in all LTO generations since LTO-4. It features a 256-symmetric key AES-GCM algorithm that is implemented at the drive level.

Slash Video Storage Costs *AND* Get Longer Retention

- Powerful VMS features and functionality
- Record high quality video at a fraction of the cost of traditional video storage systems.
- Quickly and easily playback all recorded video.
- Get the highest resolution and highest frame rates without worrying about storage capacity.

Slash Video Storage Costs And Get Longer Retention –
It IS possible and we can deliver it!

Using hard disk only video storage systems —the traditional approach to video surveillance storage— means you are paying way too much, you are sacrificing needed long-term retention, and you are missing out on the highest quality video recording you can attain.

Cozaint's BOBBYvms™ is a powerful, feature-rich, proven video management software package. Cozaint's *askALICE*™ is a scalable, enterprise-class, multi-tiered storage architecture combining NAS harddisk storage *plus* LTO data tape storage for the most affordable long-term video retention on the market.

With a Cozaint *askALICE* video surveillance solution and its scalable storage architecture, you can store high quality video footage for months or even years at a fraction of the cost to that of using a traditional enterprise hard disk or cloud system.

When integrating multiple storage tiers to expand video retention, there are significant cost savings in stark contrast to the high price for RAIDed hard disk only based solutions. Not only is nearline storage less expensive, but it is more durable and can be kept for years while retaining video quality.

We deliver an overarching, economical, scalable, professional video security system.

HIGHLY SCALABLE

Whether you have 100 or more than 1,000 surveillance cameras, the BOBBYvms with *askALICE* storage platform delivers significant cost savings over traditional video storage solutions.

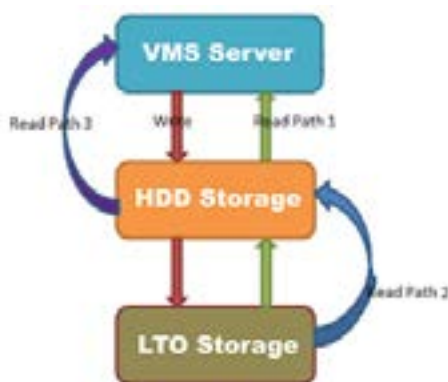

REAL COST SAVINGS

LTO technology is the proven lowest cost for video storage within the data storage market. The more video that can be recorded on LTO, the lower the overall total cost of ownership (TCO). LTO maintains its advantage over disk when the overall TCO – energy, cooling, floor space, and support.

LONG TERM RETENTION

With high capacity and reliability, LTO storage can provide years of protection at a much lower cost than other storage solutions. And with LTFS, it's easier to view, record, and playback your video than ever before.

Why Reduce Camera Quality: Record It All

- BOBBYvms and the *askALICE* video surveillance storage platform delivers the most affordable storage solution on the market without compromising ease of use in reviewing recorded video from yesterday or last year.

- End-user utilization of the BOBBYvms software requires no additional steps or intervention to quickly and easily playback and review all recorded video.

- A complete multiple-tier “Lens-to-Library” video surveillance long-term retention solution. From the BOBBYvms video management software managing IP-Cameras, to the *askALICE* multi-tiered mix of local NAS hard disk retention plus the economical LTO library for responsive long-term video retention.

Stay in control of your environment and react faster to emergencies and abnormal activities.

- Cozaint delivers a multi-tiered storage approach with high-performance primary disk storage for aggregating video from multitudes of cameras. Then -as the immediacy of time declines- the need to retain video on expensive hard disk storage devices also declines. *askALICE* copies all recorded video to a high-capacity, lower cost, tier of storage that is still readily accessible.

- Provides on-premise security solutions that keeps the user in complete control of their video.

WHY *askALICE*

- Scale Out as camera counts Increase
- Scale Up for increased retention
- Lowest TCO on the market / Period!
- Simple video playback
- Professional VMS features
- Utilize highest quality cameras
- Never sacrifice video quality
- Take advantage of 8K cameras
- Increase retention to months and years
- Powerful, Affordable, Easy!

LTO ULTRIUM ROADMAP ADDRESSING YOUR STORAGE NEEDS

NOTE: Compressed capacity for generation 5 assumes 2:1 compression. Compressed capacities for generations 6-12 assume 2.5:1 compression (achieved with larger compression ratios).
SOURCE: The LTO Program. The LTO Ultrium roadmap is subject to change without notice and represents goals and objectives only. Linear Tape Open, LTO, the LTO logo, Ultrium, and the Ultrium logo are registered trademarks of Hewlett-Packard Enterprise, IBM and Quantum in the US and other countries.

Camera Quality Is Driving Storage Needs:

5MP and 8K cameras are significantly improving video quality and usability. With **askALICE** you can now afford to keep all of that high-resolution video for as long as you need.

LEGAL FACTORS DRIVING STORAGE REQUIREMENTS

Video is considered a "record" in most jurisdictions and statutes mandate the retention of those records for months and even years. **askALICE** is the ideal solution to affordably adhere to government and industry regulations.

RECORD-ON-MOTION IS GOOD... BUT::

- Thresholds
- Too-low; too-slow
- Human Factor
- Pre- and Post- Motion Footage

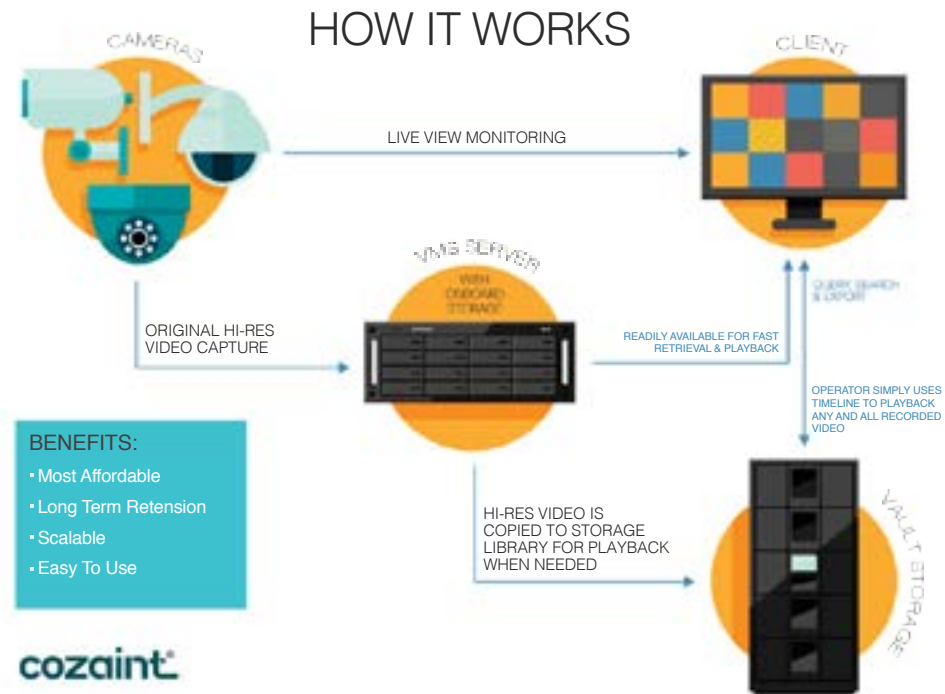

Ask yourself: "Why does 'record on motion' feature even exist?" Disk Storage! Ever try to prove a negative; "Nothing happened in the video so we didn't save it." Who sets the 'threshold' on level of movement to record?

askALICE Retains full Chain-of-Custody

Cozaint *askALICE* Video Surveillance Platform

Scalable, Multi-Tiered Video Storage

askALICE manages multiple tiers of storage resources. It captures video on a traditional hard disk storage system and then copies the recorded video to less expensive storage devices such as near-line LTO libraries. When integrating multiple storage tiers to expand video retention there are significant cost savings in stark contrast to the high price for hard disk only based solutions. Not only is nearline storage less expensive, it is more durable and can be kept for decades while retaining video quality.

Scalable, Multi-Tiered Video Storage

askALICE manages multiple tiers of storage resources. It captures video on a traditional hard disk storage system and then copies the recorded video to less expensive storage devices such as near-line LTO libraries. When integrating multiple storage tiers to expand video retention there are significant cost savings in stark contrast to the high price for hard disk only based solutions. Not only is nearline storage less expensive, it is more durable and can be kept for decades while retaining video quality.

HARD DRIVES ARE CHEAP; RETENTION IS EXPENSIVE:

Individual hard drives are cheap. Video surveillance rated hard drives are not as cheap. And when you need hundreds of terabytes or even petabytes of spinning disk, the costs are astronomical. **askALICE** reduces the dependency on hard drives for a more affordable multi-tier storage solution.

Stop looking at just a single tier of stoprage The Media and Entertainment industry has already learned the cost saving benefits of multi-tiered storage. Now, with **askALICE**, the physical security market can too.

Understanding Total Cost Of Ownership (TCO)

When you consider the cost of the hard drives themselves, the storage array you need to put them in, the cooling costs to keep that equipment running, the electricity to keep all of those drives spinning, and the support staff to swap out failed drives, it all adds up. Let us show you how **askALICE** significantly reduces all of those costs.

Cozaint *askALICE* Video Surveillance Platform

Total Cost of Ownership

The total cost of ownership is the cost of the management servers, recording servers, hard disk storage systems, any storage media, plus any operational, support, and electrical costs. The Cost Comparison graph (below) shows dramatic differences between the cost profiles of traditional hard disk only to that of a LTO-based multi-tiered solution, especially as retention grows over time.

Affordable video surveillance infrastructures take into account the long-term retention needs of an organization. Over time, a LTO multi-tiered solution will see costs rise only at a very low rate since additional LTO media is all that is required to expand capacity.

Cost Comparison - 594 TB of Storage for 2.5 Years Retention				
	Traditional Hard Disk - Online Architecture	Blu-ray/Hard Disk Online/Offline Architecture	Veracity Hard Disk Online/Offline Architecture	Hard Disk/Data Tape Online/Offline Architecture
40 15-TB HD Storage Units with enterprise drives	\$313,954	n/a	n/a	n/a
3 15-TB HD Storage Units with enterprise drives	n/a	\$23,547	n/a	\$23,547
3 COLDSTORE 15-bay 4U, Single Power Supply	n/a	n/a	\$28,934	n/a
Blu-ray optical jukebox	n/a	\$19,330	n/a	n/a
Blu-ray Discs @ \$7 each	n/a	\$77,770	n/a	n/a
9.6 TB LTO Data Tape Library (without media)	n/a	n/a	n/a	\$3,705
Hard Disk @ 109.99 each	n/a	n/a	\$50,485	n/a
Tape Cartridges @ \$29 each	n/a	n/a	n/a	\$20,358
Phoenix RSM Software Licenses	\$38,999	\$10,498	\$16,499	\$9,298
Total	\$382,953	\$131,145	\$95,919	\$56,903

The Most Affordable, Scalable Solution for Long-Term Retention

askALICE combines multiple storage options, a professional-grade video management system (VMS) to search and playback video, all managed for optimal performance. This complete video lifecycle management includes long-term retention without forcing video degradation. Expanding retention with traditional hard disk only systems requires an entirely new disk-based storage unit and additional hard disks – which can be a substantial amount of money to periodically spend. By scaling from terabytes to petabytes with multi-tiered storage and the ability to effortlessly manage online and nearline media, **askALICE** delivers the best total cost of ownership and is the most affordable, scalable, video surveillance solution for long-term retention on the market today.
