Keep months or years of video. Without leaving your VMS.

MARCIA™ Intelligent Video Lifecycle Management for enterprise surveillance

The problem

Camera counts, resolutions, frame rates and retention requirements keep rising. With disk-only storage, every one of them adds racks of hard drives that run and cool around the clock and are replaced every few years. So organizations make a trade they shouldn't have to: lower image quality, shorter retention, or a storage budget that keeps growing. Cloud storage adds recurring fees and depends on bandwidth.

Hollywood already solved this. Studios and broadcasters create some of the most valuable video in the world, and they have preserved film masters and broadcast archives on LTO tape for years: very low cost per terabyte, decades of archive life, and a stored cartridge that draws no power. Video surveillance records the same kind of data at the same scale, yet it never adopted tape. The reason was the operator: nobody wants to leave the VMS, hunt for a cartridge and wait on a restore job.

What MARCIA does

MARCIA is Cozaint's **patented** technology (U.S. Patent No. 12,755,902) that makes LTO invisible to the surveillance operator. Recent video stays on fast disk for everyday review. Older video is copied to LTO automatically under your retention policy. When an operator needs history, they simply move the VMS timeline, and MARCIA does the rest:

1 · Request	2 · Locate	3 · Map	4 · Recall	5 · Play
Operator moves the VMS timeline to a past date and time.	MARCIA identifies which storage tier holds that video.	It maps the request to the exact cartridge and position.	The tape library loads the cartridge and reads the video.	Video returns to the same VMS timeline. No IT ticket.

Competitors can sell tape libraries, archive software or disk. MARCIA's patented VMS integration is what makes the tape tier part of the operator's normal workflow.

Why it matters

- **Record at the quality you need.** Lower long-term storage cost removes the pressure to cut resolution or frame rate.
- **Keep video for longer.** Months or years of retention without adding racks.
- **Use far less power.** Archived cartridges sit on a shelf drawing nothing.
- **No new workflow.** Operators keep the VMS they already know.

Disk, cloud or MARCIA?

	Disk only	Cloud	MARCIA (disk + LTO)
Immediate access to recent video	Yes	Yes	**Yes, recent tier on disk**
Multi-year economics	Poor	Variable, recurring fees	**Strong**
Power for archived video	Continuous	Provider's	**None for cartridges at rest**
Depends on internet bandwidth	No	Yes	**No**
Offline (air-gapped) copy	Limited	No	**Yes, cartridges can be stored offline**
Operator workflow	VMS timeline	Often a separate portal	**Same VMS timeline**
Scaling to petabytes	Expensive	Expensive, recurring	**Designed for it**

Why keep more video?

Storage savings get the conversation started. The bigger reason is that historical video keeps gaining value: investigations and disputes that surface months later, litigation and liability defense, compliance and retention rules, incident reconstruction, and new analytics and AI models that can re-examine footage that would otherwise have been overwritten. MARCIA helps you preserve Trusted Visual Evidence.

Proven in the field

The City of Oceanside, California needed one year of 24/7 1080p video from more than 30 cameras at a wastewater treatment plant, about 548 TB, on a city budget. Disk alone did not fit. The multi-tier disk-and-LTO architecture that MARCIA is built on did.

> *"It is always difficult to find a system that fits within our budget and meets our long-term retention requirements. Cozaint's askALICE has been an ideal fit for our surveillance recording needs and our budget."*
>
> Scott Prather, Senior IT Analyst, City of Oceanside, CA

Works with what you run

Video management software

Milestone XProtect · Hanwha WAVE · Digital Watchdog DW Spectrum · Network Optix Nx Witness · Cozaint BOBBYvms

Validated enterprise tape

HPE StoreEver · Quantum Scalar · ATTO XstreamCORE

Built for

Banks · Casinos · Airports · Hospitals · Prisons · Campuses · Municipalities
