

Competitive Solution Brief

Executive Overview

ALICE1 is a purpose-built LTO archive appliance engineered specifically for video surveillance environments. It delivers true Video Management Software (VMS) integration, enabling seamless long-term archival and direct playback from within the operator's existing VMS interface. Unlike bridge-based tape solutions that rely on middleware and file-system filtering, ALICE1 operates as a surveillance-native archival tier designed for simplicity, reliability, and operator efficiency.

The Challenge: Long-Term Video Retention

- Rising camera counts and higher resolutions (4K / 8K)
- Increasing regulatory retention mandates
- Escalating disk and cloud storage costs
- Ransomware and cyber-security exposure
- Bandwidth dependency in cloud-based models

ALICE1 Solution Architecture

ALICE1 is delivered as a self-contained LTO archive appliance available in LTO-8 and LTO-9 configurations. It integrates directly with leading VMS platforms, functioning as an intelligent archival tier rather than a storage overlay.

- Integrated LTO automation
- Native VMS integration
- Automated tape lifecycle management
- Air-gapped ransomware protection
- Deterministic archival performance

True VMS Integration

ALICE1 integrates at the VMS workflow level. Archived footage remains visible within the standard VMS timeline. Operators search by camera, date, and time as they normally would. When archived footage is requested, ALICE1 automatically retrieves the data from LTO media and streams it back into the VMS interface for playback.

- No separate archive interface
- No secondary login or application
- No manual tape handling by operators
- Playback occurs within the original VMS console
- Metadata and chain-of-custody preserved

Competitive Comparison

Category	ALICE1 Appliance Model	Bridge-Based Tape Model
Deployment	Purpose-built appliance	Software + third-party tape library
VMS Experience	Native playback inside VMS	Middleware-managed integration
Infrastructure	Single integrated system	Multi-component architecture
Operator Workflow	Transparent and seamless	Dependent on storage abstraction
Maintenance	Appliance lifecycle	Software + library compatibility matrix

Security & Compliance

ALICE1 provides true air-gapped storage through LTO media. Archived recordings are immutable once written, protecting them from ransomware and cyber intrusion. The solution supports data sovereignty requirements and ensures long-term evidentiary integrity.

Results

ALICE1 delivers a surveillance-focused LTO archival platform that prioritizes seamless VMS playback, operator workflow continuity, ransomware resilience, and long-term cost control. For organizations requiring multi-year retention with simplified access to archived footage, ALICE1 provides a streamlined alternative to bridge-based tape solutions.

About Cozaint

Founded in 2018, Cozaint delivers intelligent surveillance solutions that empower organizations to harness the full potential of their physical security infrastructure. When you need leading edge physical security solutions, lean on Cozaint. Learn more at www.Cozaint.com. Cozaint and the Cozaint logo are registered trademarks of Cozaint Corporation. For more information, visit www.cozaint.com.

Headquartered in Miami Florida with offices in San Diego, CA, Cozaint Corporation is a service-disabled veteran owned business.
